

Compound Dairy Range

Premium compound feed for peak performance

The NRM ProForm Dairy Range has been designed with the wide variety of New Zealand dairy farming systems and herd requirements in mind.

Formulated to complement our pasture based production systems this range of feeds provides dairy farmers with a choice of cost effective supplements to supply those nutrients which may be in short supply in the ration of a lactating cow.

All feeds in the ProForm Range contain a flavouring to help encourage feed intake.

ProForm Standard

The foundation of the ProForm range, **ProForm Standard** is a cost-effective feed that provides essential nutrients when pasture is in short supply. Designed to provide trace minerals, magnesium, calcium and sodium required by lactating cows when fed at 3kg. High energy grains provide a source of starch and make this feed a balanced alternative to palm kernel meal.

ProForm Premium

The most popular feed in the ProForm range, **ProForm Premium** is a proven performer, designed to provide a source of fermentable carbohydrates as well as the macro and trace minerals required by dairy cows. This versatile feed now contains added magnesium, calcium and sodium and is available formulated for either a 2 or 3kg feeding rate ensuring that your cows receive optimum mineral supplementation when lower feeding rates are required.

ProForm Elite

Designed as a nutrient rich feed ideal for high producing dairy cows or those in early lactation, **ProForm Elite** is formulated to be fed at 3kg per cow per day. It provides all the calcium, magnesium and sodium typically required by cows in early lactation. A comprehensive premix supplies the vitamins and trace minerals required to help support a healthy immune systems, production and fertility in the high producing herd. A yeast additive, rich in bioactive ingredients, is included to help enhance rumen function, and fibre digestion, supporting feed intake in high producing or early lactation cows.

Protein+ Supplements

High protein supplements, **ProForm Protein+ Standard** and **ProForm Protein+ Premium** are designed to provide a source of good quality protein, ideal for summer when protein supply from pasture is low or as a supplement when other low protein forages, such as maize silage make up a large part of the diet.

Nutritional Additives

A range of additives are available for inclusion in your preferred ProForm product. These include Bovatec®, zinc oxide, Mycofix® Secure, Mycofix® Plus, By-pass Fat and NRM Feed & Teats pack.

Registered products are included at recommended dose rates only.

Ingredients selected from:

Grain and grain by-products, oilseed meals, vegetable oils and fats, molasses, limestone, dicalcium phosphate, magnesium oxide, salt, vitamins and trace minerals, flavour, yeast.
