

# Dairy Blend Pellet

## Molassed grain pellet for inclusion in blends

A grain based, molassed pellet that can be added to blends to deliver starch in a palatable, processed form.

NRM Dairy Blend Pellets contain:

- Starch from grains in addition to sugar from molasses, which are readily fermentable and can help stimulate milk protein production.
- No added minerals to provide the freedom to deliver elsewhere in the blend.
- Hammer milled and pelleted ingredients to ensure good utilisation with minimal waste and appeal compared to dry rolled grains.
- No added trace minerals, so a good option for farmers who prefer to deliver trace minerals via other routes.

### Feeding recommendation

Typical feeding rates are 1-4kg/head/day as part of a blend with straights such as PKE, DDGS and soya hulls. If cows are not currently fed grain or pellets, introduce Dairy Grain Pellets at 0.5-1kg per milking (1-2kg/day) and gradually increase by 0.15kg/day until the desired intake has been achieved.

Always provide access to long forage and clean drinking water.

To discuss the optimum feeding levels and diet for your herd, please call your local NRM Nutrition Specialist on 0800 800 380.

### Ingredients selected from

Barley, wheat and molasses.

### Typical analysis (approximate on a DM basis)

Energy	13.3 MJ ME/kg
Crude Protein	11%
Starch & Sugar	55% (min)
NDF	15% (max)

The Metabolisable Energy (ME) values are calculated from an equation and are not an actual measured value but should provide a reasonable guide to the energy content of the feeds. Information is accurate at the time of going to print but specifications may vary over time.
