

# NRM Sheep Triplet Nuts

## High protein supplement

NRM Sheep Triplet Nuts are a high protein supplement for ewes that have been scanned as carrying triplets. Good nutrition for triplet bearing ewes is important to ensure larger, stronger lambs, as well as high levels of milk production. Can be fed after lambing if required.

## KEY BENEFITS AND FEATURES

- Quality ingredients in a 10mm nut to ensure optimum utilisation and reduced wastage.
- Highly digestible ingredients at a time when rumen space and feed intake is limited due to the number of lambs.
- High protein feed with quality protein sources that provide by-pass protein for good foetal lamb growth and milk production.
- High levels of digestible energy and metabolisable energy (ME) with a combination of carbohydrates and vegetable oils.
- A wide range of essential vitamins, minerals and trace-elements. This includes vitamins A, D<sub>3</sub> and E, as well as trace elements such as cobalt, iodine, copper, manganese, zinc and selenium.

The NRM quality assurance programme ensures products are quality tested to meet their stated specifications.

## TYPICAL ANALYSIS APPROXIMATE ON A DRY MATTER BASIS

Metabolisable Energy* MJ ME/kg	12.8
Crude Protein%	25
Crude Fat % (minimum)	2
Selenium mg/kg	1

\*Metabolisable Energy (ME) values are calculated by a registered laboratory from an equation and are not an actual measurement. Therefore they are only a guide for predicting the energy content of a feed.

Variations in nutritional values may occur due to natural variability in feed ingredients. Our FeedSafe NZ certified sites have well developed systems to minimise any variation from the typical levels shown.

## INGREDIENTS SELECTED FROM

Grains (wheat, barley, maize), grain by-products, oilseed meals, legumes (peas, beans), molasses, sodium bentonite, minerals, trace elements and vitamins, vegetable oils. Product may contain or be sourced from genetically modified source crops.

This product does not contain any Restricted Animal Material.

NRM Sheep Triplet Nuts contain added cobalt, iodine, manganese, selenium and zinc in addition to calcium, sodium and vitamins A, D<sub>3</sub> and E. If supplementing these trace elements in other ways (pasture, drench or injection) then please consult with the NRM nutrition team or your veterinarian. To discuss the optimum feeding levels and diet for your flock please call the NRM Nutrition Team on 0800 800 380.

## FEEDING RECOMMENDATIONS

**In-lamb triplet bearing ewes:** typically up to 200g/h/day. Milking ewes with 1, 2 or 3 lambs at foot: typically up to 200g/h/day.

**Generally not fed to pregnant ewes carrying single or twin lambs.**

Optimum feeding rates depend on pasture availability and quality and the age and condition of the sheep. Start feeding NRM Triplet Nuts five weeks prior to lambing. Do not start feeding before five weeks otherwise lambs may be too big. Continue feeding after lambing if grass quality or supply is inadequate to help support milk production or where older ewes need extra support.

Transition onto NRM Triplet Nuts by starting with 50g/head/day for a week before building up to 200g/head/day over the following week. Feed in a line or many small piles to reduce competition. Ensure an adequate amount of forage and clean water is available at all times.

NRM Sheep Triplet Nuts are suitable for feeding to non-lactating and lactating sheep.

## STORAGE

Store in a cool, dry and vermin free environment out of direct sunlight.

Remove pallet wrap when in final location to prevent sweating.

## RECYCLE ME

NRM bags with the Recycle Me logo use 25% less plastic per bag compared to previous versions, giving them a lower carbon footprint and enable their recyclability through Agrecovery. NRM bags are made from woven polypropylene.
