

Sheep Pre-Tup Nuts

High performance supplement for sheep prior to breeding

NRM Sheep Pre-Tup Nuts are a high performance supplement to boost the ewe flock at tupping time. Good nutrition is important to ensure high ovulation and conception rates, as well as fewer returns to service.

KEY BENEFITS AND FEATURES

- Quality ingredients in a 10mm nut to ensure optimum utilisation and reduced wastage.
- High levels of digestible energy and metabolisable energy (ME) compared with forage from processed grains and rumen protected fat.
- Added protein from legumes and soya to supplement pasture levels which can be low over mating.
- Mycotoxin binder to reduce the impact of mycotoxins in pasture and other feeds during this crucial period
- Contains molasses for increased palatability.
- A wide range of essential vitamins, minerals and trace elements. In particular, it contains high levels of vitamin E and selenium for follicle quality and conception rates.

The NRM quality assurance programme ensures products are quality tested to meet their stated specifications.

TYPICAL ANALYSIS APPROXIMATE ON A DRY MATTER BASIS

Metabolisable Energy* MJ ME/kg	13.5
Crude Protein %	15.5
Crude Fat % (minimum)	4
Selenium mg/kg	2mg

*Metabolisable Energy (ME) values are calculated by a registered laboratory from an equation and are not an actual measurement. Therefore they are only a guide for predicting the energy content of a feed.

Variations in nutritional values may occur due to natural variability in feed ingredients. Our FeedSafe NZ certified sites have well developed systems to minimise any variation from the typical levels shown.

INGREDIENTS SELECTED FROM

Grains (wheat, barley, maize), grain by-products, oilseed meals, legumes (peas, beans), molasses, sodium bentonite, minerals, trace elements and vitamins, vegetable oil, rumen protected fat. Product may contain or be sourced from genetically modified source crops.

This product does not contain any Restricted Animal Material. Contains nutritional levels of cobalt, iodine, copper, manganese, zinc and selenium, as well as vitamins A, D₃ and E. If supplementing these trace elements in other ways (pasture, drench or injection) then please consult with the NRM nutrition team or your veterinarian. To discuss the optimum feeding levels and diet for your flock, please call the NRM Nutrition team on 0800 800 380.

FEEDING RECOMMENDATIONS

Lighter ewes/hoggets: Typical feeding rate is 500g/head/day.

Rams and ewes: Typical feeding rate is 200g/head/day.

Optimum feeding rates depend on pasture availability and quality, and the age and condition of the sheep. Start feeding NRM Pre-Tup Nuts four to six weeks prior to tupping and feed until tupping. To maximise benefits to the flock feed NRM Pre-Tup Nuts during tupping.

Transition onto NRM Pre-Tup Nuts by starting with 50g/head/day for a week before building up to 200g/head/day over the following week. If feeding lighter ewes and hoggets then allow another week to increase up to 500g/head/day. Feed in a line or many small piles to reduce competition, and ensure an adequate amount of forage and fresh, clean drinking water is available at all times.

NRM Pre-Tup Nuts are suitable for feeding to non-lactating and lactating sheep.

STORAGE

Store in a cool, dry and vermin free environment out of direct sunlight. Remove pallet wrap when in final location to prevent sweating.

RECYCLE ME

NRM bags with the Recycle Me logo use 25% less plastic per bag compared to previous versions, giving them a lower carbon footprint and enable their recyclability through Agrecovery. NRM bags are made from woven polypropylene.
